## JOB MARKET PAPER

**Voting at the Dining Table: How Mail-in Ballots Impact Couples' Political Behavior**
Abstract: This paper studies how mail voting reshapes the political behavior of couples in the United States. Leveraging differences in implementation across states, I study its effects throughout the political decision-making process, both across and within election cycles. Partners overwhelmingly adopt mail voting jointly, reshaping the household's political life: exploiting the varying length of mail-voting periods across states, I show that couple members report significantly more political interactions during such periods, while singles do not. I then document three direct downstream consequences. The introduction of mail voting is associated with a leftward shift among married men, in both partisan ideology and policy views. This effect is primarily concentrated among independent and left-leaning men, while no effects are uncovered among Republicans. Using administrative data on the content and origin of actual ballots, I show that mail voting is associated with significant excess pairs of identical ballots within precincts, suggesting important coordination between partners. Finally, mail-voting periods are associated with a 1.8% increase in the daily number of reported violent incidents between partners, highlighting that increased observability can result in higher within-couple conflict.
